## Question Bank for Main Paper

## **Electrical Engineering**

- Q1 (a) How is the <u>uniform wear</u> of the 'pantograph strip' due to rubbing with contact wire ensured in OHE?
- (b) Draw sketch of a 'Cantilever assembly' of OHE, name different parts and show location of Contact and Catenary Wires.
- Q.2 Explain what do you understand by the following?
- a. DC viz a viz AC Traction
- b. Circuit Breaker
- c. Electric Energy Conservation
- d. End-on-Generation
- e. Factor of AC comfort
- f. LHB
- g. Flasher Light
- Q.3 Explain the working of 'Air Conditioning system' of AC coach with the help of sketch.
- Q.4 (a) What is the difference between 'regulated & unregulated OHE'? How is OHE regulation achieved?
- (b) What are the functions performed by the following equipments in an electric loco?
  - a. Tap Changer
  - b. Baby Compressor
  - c. Arno Converter
- Q.5 (a) Write brief note on the following:
  - a. Neutral Section
  - b. Rail Bonds
  - c. Power Block & Traffic Block
- (b) For a WCAM1 Co-Co 123 T locomotive, indicate the following:
  - a. Type of Traction
  - b. Type of Service
  - c. Number of Traction Motors
  - d. Axle Load
- Q.6 Write brief notes on
  - a. Breath Analyser Equipment
  - b. Tractive Effort and Adhesion
  - c. Electrical Clearance
  - d. Difference in requirements of Goods & Passenger Locos
  - e. Various types of Brakes on electric locomotives
  - f. Electric Loco Maintenance Schedules
- Q.7 Draw 'power circuit' diagram of an AC electric loco.

| Q.8  | Writ    | te brief notes on   | any four         |                   |                     |             |
|------|---------|---------------------|------------------|-------------------|---------------------|-------------|
|      | a.      | EMU                 |                  |                   |                     |             |
|      | b.      | Safety item on      | Loco             |                   |                     |             |
|      | С.      | Traction Sub S      | tation           |                   |                     |             |
|      | d.      | Various Train       | Lighting Systen  | ns                |                     |             |
|      | e.      | Roof Mounted        | Package Unit     |                   |                     |             |
|      | f.      | 3-Phase Loco        |                  |                   |                     |             |
| Q. 9 | Please  | e mark the corre    | ect answer.      |                   |                     |             |
|      | 1.      | Axial distance      | e between        | catenary          | & contact wi        | ire at the  |
|      |         | <b>OHE</b> support  | t in vertical    | plane is          | called?             |             |
|      | (0      | a) implantation     |                  | t of OHE<br>agger | (c) encumbranc      | ce (d)      |

| 5. | Remote Control Center |
|----|-----------------------|
|    |                       |

| Q.14 For a conventional AC loco motive please explain the following- <i>I. Tap change</i>   |
|---|
| II. DJ  |
| III. Regulating winding   |
| IV. Rectifier   |
| V. Dynamic Brakes   |
| <ul> <li>Q.15 (a) Please indicate various types of train lighting systems.</li> <li>(b) Please name the factors governing comfort of a passengers in an air-conditioned coach.</li> <li>Q.16 (a)Who is designated EIG on Indian Railways? What is his role?</li> <li>(b) A tube light rated 50 watts (electric powers) is used for 10 hours per day for 30 days in a month. How much electric energy is being consumed by it per month?</li> <li>Q.17 For 25 KV AC traction OHE system explain the following 1. SPAN</li> </ul> |
| 2. Setting Distance   |
| 3. Encumbrance  |
| 4. Portal   |
| <ul> <li>Q.18 (a) Please draw various warning board provided to inform loco pilot about approaching neutral section?</li> <li>(b) In a 25 KV OHE system specify the following for contact wire used?</li> <li>1. Material</li> <li>2. Shape</li> </ul>  |
| Q.19 RDSO has designed a new locomotive which will be known as YAP1 Bo-Bo. It uses DC traction motors, each capable of delivering 500 kilowatt of power output. Total weight of the loco is 80 tonnes. Please indicate-  1. Loco is capable of delivering   |

- Q.21 Indicate various types of breaks which could be provided in an electric locomotive. Which of these breaks in more energy efficient and why?
- Q 22 For minimizing the length of OHE to be isolated under fault, various kind of switches are used. Please mention these along with associated features in terms of their capability to sense fault, open on load and possibility of remote operation. Name the section of OHE controlled by these switches.

| Name of the switches | Capable | Capable of |             |            |  |  |
|----------------------|---------|------------|-------------|------------|--|--|
|                      | Fault   | Opening on | Remote      | section of |  |  |
|                      | sensing | load       | operational | OHE        |  |  |
|                      |         |            |             | controlled |  |  |
| 1                    |         |            |             |            |  |  |
|                      |         |            |             |            |  |  |
| 2                    |         |            |             |            |  |  |
|                      |         |            |             |            |  |  |
| 3                    |         |            |             |            |  |  |
|                      |         |            |             |            |  |  |

- Q.23 How is speed of an electric loco controlled? Please explain briefly.
- Q 24. What is the purpose of OHE regulation? How is it achieved?. How much tension is kept in regulated OHE.
- Q.25 Please indicate the illumination levels provided at following locations?
  - a. ASM room
  - b. Booking Window
  - c. Officers Chamber
  - d. Operation theatre in Hospital
- Q.26 Write various advantages of using high mast tower lighting viz a viz Sodium lamps in circulating areas.
- Q.27 Draw a schematic diagram of Power supply distribution substation for a rly colony.
- Q.28 Write advantages of 'Underground cable' with respect to 'Overhead line'.
- Q.29 What are the different type of fire extinguishers used for different type of fires. Describe in brief working of fire extinguisher used for 'electrical fire'.
- Q.30 Indicate power of following electrical appliances
  - a. Incandescent Lamp
  - b. T5 Tube light
  - c. Ceiling fan
  - d. Light socket (5mpr)

- e. 1.5 tone window AC f. Electric iron
- Q.31 Write short note on two flat rate terry and two parts terry system.
- Q.32 Write short note on UPS and its usage in railway system.
- Q.33 What are the advantages of 'sealed maintenance battery' with viz –a-viz conventional battery.
- Q.34 describe in brief various 'fire preventing measures' taken in a coach on Railway system.
- Q.35 What are different types of pumps used in Railway colony. Write short note on any one of them.
- Q.36 What are the criteria taken in to consideration while deciding pump capacity .
- Q.37 Write ten steps taken for 'energy conversation' in railway system in a non electrified territory.
- Q.38 Write short note on different type of train lighting system used in Indian Railways.
- Q.39 Draw a schematic diagram of '110V DC train lighting system'.
- Q.40 Write note on capacity of different batteries used in various type of coaches in IR.
- Q.41 Write short note on level of illumination followed in different type of coaches in IR.
- Q.42 Please indicate various types of maintenance schedules carried out in AC coaches.
- Q.43 Draw typical schematic diagram of typical 'Traction sub -station'.
- Q.44 Write short note on following
  - a. SSP
- b. BSP
- c. CFP
- Q.45 Write short note on Remote Control Centre.
- Q.46 What are the different type of OHE bonds used in electrified territory.
- Q.47 Write short note on following
  - a. Sub sector, b. Elementary section, c. Sector d. Tension length
- Q.48 Write short note on following-
- a. Stagger b. Setting distance c. Insulated overlap d. Neutral section
- Q.49 Write short note on following
  - a. Different type of Traction masts Used in OHE
  - b. Different type of Foundations
  - c. Different type of portals
- Q.50 Write short note on following
  - a. Type of insulators
  - b. Type of jumpers

- Q.51 Draw sketch of following
  - a. Structure bond
  - b. Draper assembly
  - c. Side bearing foundation
  - d. BFB type mast
- Q.52 Write short note on quota of scheduled monthly inspections to be carried by TRD officers in a Division.
- Q.53 The floor diagram of different equipments of electric locomotives.
- Q.54 Write short note on
  - a. Arno convertor
  - b. Tap changer
  - c. SL
  - d. SIU
- Q.55 Indicate wheel arrangements for following type of locomotives
  - a. WAG4
  - *b. WM4*
  - c. WAP5
  - d. WAG6
- Q.56 What are the different maintenance schedules carried in an passenger & goods Electric Loco?
- Q.57 What are the different classifications of running staff from safety gradation point of view?
- Q.58 Write short note on following
  - a. PME
  - b. LRD
  - c. Periodical rest
  - d. Running duty hours
- Q.59 What are the different type of running allowances payable to loco running staff.
- Q 60 a) Write five safety items provided in an electric loco.
  - b) Write short note on 'Brake power certificate' and 'Caution Order'.

# **Question Bank for Quiz** (Electrical Engineering)

## I) Power/Coaching

| Q.1     | Illuminance is defined as   |  |  |  |  |  |  |  |
|---------|---|--|--|--|--|--|--|--|
| Q.2     | The unit for measuring illuminance is   |  |  |  |  |  |  |  |
| Q.3     | Full form of CFL is   |  |  |  |  |  |  |  |
| Q.4     | The diameter of T8 version of Fluorescent tube light is                             |  |  |  |  |  |  |  |
| Q.5     | Wattage of T5 Fluorescent tube light is   |  |  |  |  |  |  |  |
| Q.6     | Life of T5 lamp is approximatelyburning hours.                                      |  |  |  |  |  |  |  |
| Q.7     | Full form of LED lamp islamp.   |  |  |  |  |  |  |  |
| Q.8     | The platform lighting at railway station is divided in two circuits. Before arrival |  |  |  |  |  |  |  |
|         | of train,light is switched on.  |  |  |  |  |  |  |  |
| Q.9     | <u>DCP</u> type of fire extiquisher used for electrical fire.                       |  |  |  |  |  |  |  |
| Q.10    | Full form of ACSR conductor is  |  |  |  |  |  |  |  |
| Q.11    | The voltage and frequency of domestic power supply system in India is               |  |  |  |  |  |  |  |
|         | and   |  |  |  |  |  |  |  |
| Q.12    | Average life of lead acid battery isyrs.  |  |  |  |  |  |  |  |
| Q.13    | Battery ofampere hour capacity is used in AC 3tier coach.                           |  |  |  |  |  |  |  |
| Q.14    | Rating of alternator for BG AC coach is <u>18/25 KW</u> .                           |  |  |  |  |  |  |  |
| Q.15    | The cut in speed for 4.5kw alternator used in Sleeper class coach is                |  |  |  |  |  |  |  |
|         | kmph.   |  |  |  |  |  |  |  |
| Q.16    | In sleeper class coach ,lux of illumination level is minimum needed.                |  |  |  |  |  |  |  |
| Q.17    | Term "air-conditioning" was coined byin 1906.                                       |  |  |  |  |  |  |  |
| Q.18    | The EFT in coaches is provided for  |  |  |  |  |  |  |  |
|         | a. Controlling the DC supply  |  |  |  |  |  |  |  |
|         | b. Feeding the battery  |  |  |  |  |  |  |  |
|         | c. Extending power supply to/from the adjoining coaches                             |  |  |  |  |  |  |  |
|         | d. None of the above  |  |  |  |  |  |  |  |
| Q.19    | Subject of Air conditioning of coaches on Indian Railways comes under the           |  |  |  |  |  |  |  |
| jurisdi | iction of   |  |  |  |  |  |  |  |
|         | a. CESE b. CEGE c. CELE d. CEDE   |  |  |  |  |  |  |  |

| Q.20  | Turbine pumps are used up to a suction head of |                  |            |             |          |        |           |            |        |     |
|-------|--|------------------|------------|-------------|----------|--------|-----------|------------|--------|-----|
|       | a. 10  | 00 Ft.           | b. 1       | 00 Ft.      |          | C.     | 20 Ft.    | d          | . 50 F | t.  |
| Q.21  | The  | yard stick for   | provisio   | n of Elec   | trical p | ooints | in staff  | quarters   | can    | be  |

Q.36 Both of the pump and motor are inside water in case of

"You are working in Western Railway which comprises of Mumbai, Vadodara, Ahmedabad, Rajkot, Bhavnagar, and Ratlam divisions. While Mumbai Vadodara and Ratlam divisions are almost fully electrified, Rajkot and Bhavnagar Divisions have no electrification. Some portion of Ahmedabad divisions is electrified. There are 2 Eectric loco sheds in Western Railway i.e. Vadodara and Valsad (in Bombay Division). There is a Makarpura TSS and conventional neutral section at LKD station between Makarpura and Bharuch. Makarpura to Bharuch is a flat section and maximum possible distance between the masts has been kept."

| Q.69 | In AC traction,                | normal encumbrance      | at support is:-            |                      |
|      | (a) 1.9 m                      | (b) 1.4 m               | (c) 0.9 m                  | (d) 2.0 m            |
|      |                                |                         |                            |                      |
| Q.70 | In AC tractio                  | n, height of contact    | wire at support from ra    | ail level (regulated |
|      | OHE) with 10                   | Omm pre sag in con      | tact wire is :-            |                      |
|      | (a) 5.5 m                      | (b) 5.55 m              | (c) 5.6 m                  | (d) 5.75 m           |
| Q.71 | In AC traction,                | height of contact wire  | e from rail level in Carsh | ned is:-             |
|      | (a) 5.6 m                      | (b) 5.65 m              | (c) 5.75 m                 | (d) 5.8 m            |
| Q.72 |                                | -                       | e catenary wire at sup     | •                    |
|      | (regulated OH                  | E) with 100 mm pre      | sag in contact wire is     | about :-             |
|      | (a) 7 m                        | (b) 7.75 m              | ` ,                        | ,                    |
| Q73  | At level crossir<br>surface is | ng gate, maximum h      | eight of rail height ga    | uge from the road    |
|      | (a) 4.381 m                    | (b) 4.67 m              | (c) 4.80 m                 | (d) 4.45 m           |
|      |                                |                         |                            |                      |

| Q.74 At level crossing gate ,normal height of contact wire from the rail level is    |                            |                  |                                 |                       |       |  |  |
|--|----------------------------|------------------|---------------------------------|-----------------------|-------|--|--|
|  | (a) 5.80. m (b) 4.67       | m (c) 4          | .80 m (d) 5.5                   | 50m                   |       |  |  |
| Q.75   | The fittings, which is     | used to trans    | fer the weight                  | of contact wire to    | the   |  |  |
|  | catenary wire is called:   | -                |                                 |                       |       |  |  |
|  | (a) section insulator      |                  | (b) Jumpers                     |                       |       |  |  |
|  | (c) cantilever assembly    |                  | (d) droppers                    |                       |       |  |  |
| Q 76   | Diameter of in-span dro    | opper in ac trac | ction is:-                      |                       |       |  |  |
|  | (a) 7 mm (b) 6.            | 75 mm            | (c) 6 mm                        | (d) 5 mm              |       |  |  |
| Q. 77  | Material of AC contact w   | rire is :-       |                                 |                       |       |  |  |
|  | (a) hard drawn copper      |                  | (b) annealed                    | l copper              |       |  |  |
|  | (c) cadmium copper         |                  | (d) brass                       |                       |       |  |  |
| Q.78   | In AC traction, maximum    | stagger of con   | tact wire on tan                | gent track is :-      |       |  |  |
|  | (a) 380 mm (b) 30          | 00 mm (c)        | 229 mm                          | (d) 200 mm            |       |  |  |
| Q.79   | On tangent track, conta    | act stagger is   | 200 mm at sup                   | pport, what will be   | e the |  |  |
|  | catenary stagger?          |                  |                                 |                       |       |  |  |
|  | (a) 300 mm.                | (b) 200 mm.      | (c) 100 mm.                     | (d) Zero              |       |  |  |
| Q.80   | In regulated OHE, how m    | nuch tension is  | kept in OHE:-                   |                       |       |  |  |
|  | (a) as per tension / temp  | perature chart   | (b) 30                          | 000 kg                |       |  |  |
|  | (c) 2000 kg                |                  | (d) 1500 kg                     |                       |       |  |  |
| Q.81   | In regulated OHE, Where    | anti-creep po    | int is provided?                |                       |       |  |  |
|  | (a) starting of tension le | ngth             | (b) finishing of tension length |                       |       |  |  |
|  | (c) midway of tension le   | ngth             | (d) all of the                  | (d) all of the above  |       |  |  |
| Q.82   | Tramway type OHE can       | be used for :-   |                                 |                       |       |  |  |
|  | (a) main line              |                  | (b) siding onl                  | у                     |       |  |  |
|  | (c) wiring of turnouts     |                  | (d) all of the                  | above                 |       |  |  |
| Q.83 A neutral section is provided in OHE between two 25 KV , single $$ phase, 50 $$ |                            |                  |                                 |                       |       |  |  |
| Htz. traction sub-stations due to :-   |                            |                  |                                 |                       |       |  |  |
|  | (a) to separate the zon    | es, which fed    | by the adjacen                  | t sub station of diff | erent |  |  |
|  | phase                      |                  |                                 |                       |       |  |  |
|  | (b) to increases the curr  | ent carrying ca  | apacity of the Ol               | HE                    |       |  |  |
|  | (c) to minimise the volta  | ge drop in OH    | E conductors                    |                       |       |  |  |
|  | (d) all of the above       |                  |                                 |                       |       |  |  |

| Q.84              | 25 KV traction system needs th   | e supply of :-         |                             |  |  |  |
|-------------------|--|------------------------|-----------------------------|--|--|--|
|                   | (a) single phase   | (b) two phas           | se                          |  |  |  |
|                   | (c) three phase  | (d) three ph           | ase & neutral wire          |  |  |  |
| Q.85 I            | Q.85 In an AC TSS , which phase of 132 KV/25 KV traction transformer should be |                        |                             |  |  |  |
|                   | earthed?   |                        |                             |  |  |  |
|                   | (a) one phase of 132 KV prima  | ry side                |                             |  |  |  |
|                   | (b) both phases of 132 KV primary side   |                        |                             |  |  |  |
|                   | (c) one phase of 25 KV second  | dary side              |                             |  |  |  |
|                   | (d) both phases of 25 KV second  | ndary side             |                             |  |  |  |
| Q.86 S            | Sub- Sectioning & parallel Post  | (SSP) are employed in  | n OHE due to ?              |  |  |  |
|                   | (a) to minimise voltage drop   | (b) OHE sec            | ctioning purpose            |  |  |  |
|                   | (c) restrict tension length  | (d) all of the         | above                       |  |  |  |
| Q.87              | The distance of OHE section be   | tween FP & SP is cal   | led :-                      |  |  |  |
|                   | (a) feeding length   | (b) feeding a          | zone                        |  |  |  |
|                   | (c) sector   | (d) sub sect           | or                          |  |  |  |
| Q.88 <sup>-</sup> | The shortest section of OHE, w   | hich can be isolated t | hrough remote control by    |  |  |  |
|                   | TPC is called :-   |                        |                             |  |  |  |
|                   | (a) elementary section   | (b) feeding            | zone                        |  |  |  |
|                   | (c) sector   | (d) sub sect           | or                          |  |  |  |
| Q. 89             | The shortest section of OHE, w   | hich can be isolated n | nanually is called :-       |  |  |  |
|                   | (a) elementary section   | (b) feeding 2          | zone                        |  |  |  |
|                   | (c) sector   | (d) sub sect           | or                          |  |  |  |
| Q.90 N            | Normally, bridging interrupters  | at SP are in :-        |                             |  |  |  |
|                   | (a) close position   |                        |                             |  |  |  |
|                   | (b) open position  |                        |                             |  |  |  |
|                   | (c) when traction load increase  | d than closed bridging | ginterrupter                |  |  |  |
|                   | (d) when traction load decrease  | ed than closed bridgin | g interrupter               |  |  |  |
| Q. 91             | In AC traction ,distance between   | en two OHE's condu     | ctor ininsulated overlap is |  |  |  |
| kept:             |  |                        |                             |  |  |  |
|                   | (a) 500 mm. (b) 380 mm.  | (c) 300 mm.            | (d) 200 mm.                 |  |  |  |
| Q. 92             | In AC traction, distance be  | etween two OHE's co    | onductor in un- insulated   |  |  |  |
|                   | overlap is kept:-  |                        |                             |  |  |  |
|                   | (a) 375 mm. (b) 300 mm.  | (c) 150 mm.            | (d) 200 mm.                 |  |  |  |

| Q.93  |                       | tral section, you   | ı prefer in heavily gra  | nded or suburban   |  |  |
|-------|-----------------------|---------------------|--------------------------|--------------------|--|--|
|       | section?              | 4                   | ) DTEE T                 |                    |  |  |
|       | (a) overlap type      | ` '                 | ) PTFE. Type neutral s   |                    |  |  |

|       | (a) 100 m.& 500 m.    |                     | (b) 2000 m. & 100        | 0 m.               |  |  |
|       | (c) 500 m. & 250 m    |                     | (d) 250 m. & 150 m.      |                    |  |  |
| Q.97  | A device, which ins   | talled in contact v | wire to separate two el  | ementary section & |  |  |
|       | provide smooth pas    | ssage for pantogr   | aph is called :-         |                    |  |  |
|       | (a) insulated overla  | p                   | (b) section insulator    |                    |  |  |
|       | (c) bracket Assemb    | oly                 | (d) cut-in insulator     |                    |  |  |
| Q.98  | At the location of se | ection insulator,   | stagger of contact wire  | should be:-        |  |  |
|       | (a) zero              | (b) 200 mm          | (c) 300 mm               | (d) 380 mm         |  |  |
| Q.99  | Which insulator is us | sed in ac section   | insulator assembly:-     |                    |  |  |
|       | (a) sectioning insula | ator                | (b) cut insulator        |                    |  |  |
|       | (c) 9- ton insulator  |                     | (d) stay tube insula     | ator               |  |  |
| Q.99  | The arrangement of    | the cantilever as   | ssembly depends upon     | the :-             |  |  |
|       | (a) height of contact | t wire              | (b) setting distance     | e                  |  |  |
|       | (c) stagger           |                     | (d) all of the above     | е                  |  |  |
| Q.100 | ) Which is not a part | of the cantileve    | er assembly ?            |                    |  |  |
|       | (a) steady arm        |                     | (b) adjuster sleev       | /e                 |  |  |
|       | (c) anti wind clamp   |                     | (d) PG clamp.            |                    |  |  |
|       |                       |                     |                          |                    |  |  |

| Q.101 Why gap should be required between register arm tube & anti wind clamp |                              |                    |  |  |
|--|------------------------------|--------------------|--|--|
| strap:-  |                              |                    |  |  |
| (a) to avoid hard spot   | (b) to hold the register arm |                    |  |  |
| (c) to maintain proper height & stagger                                      | r (d) to hold s              | steady arm         |  |  |
| Q.102 Minimum working clearance for 25 KV                                    | AC is :-                     |                    |  |  |
| (a) 500 mm (b) 1 m   | (c) 2 m                      | (d) 3 m            |  |  |
| Q.103 Normally, which type earth electrode                                   | is preferred for earth       | ning in 25 KV AC   |  |  |
| Installations: -   |                              |                    |  |  |
| (a) plate type (b) pipe type   | (c) strip type               | (d) none of the    |  |  |
| above  |                              |                    |  |  |
| Q.104 Minimum earth resistance when not sp                                   | pecified should not be       | e more than :-     |  |  |
| (a) 9 ohm (b) 10 ohm   | (c) 5 ohm                    | (d) 2.5 ohm        |  |  |
| Q.105 Minimum earth resistance for 25 KV TS                                  | SS should not be mo          | re than :-         |  |  |
| (a) 5 ohm (b) 2 ohm  | (c) 1 ohm                    | (d) 0.5 ohm        |  |  |
| Q.106 Minimum earth resistance for 25 KV s                                   | switching station (SS        | P / SP etc) should |  |  |
| not be more than :-  |                              |                    |  |  |
| (a) 5 ohm (b) 2 ohm  | (c) 1 ohm                    | (d) 0.5 ohm        |  |  |
| Q.107 Lightning arrester prevents OHE from :                                 | -                            |                    |  |  |
| (a) surge & transient voltage  |                              |                    |  |  |
| (b) corrosion of -ve path conductor  |                              |                    |  |  |
| (c) back e.m.f.  |                              |                    |  |  |
| (d) all of the above   |                              |                    |  |  |
| Q.108 The distance between centre line of                                    | the track to the ne          | arest face of the  |  |  |
| structure is called:-  |                              |                    |  |  |
| (a) clear span   | (b) track separation         | n .                |  |  |
| (c) implantation   | (d) track clearance          |                    |  |  |
| Q.109 Implantation is also known as :-                                       |                              |                    |  |  |
| (a) skip distance  | (b) setting distance         | •                  |  |  |
| (c) clear span.  | (d) track separation         | n                  |  |  |
| Q.110 What will be the "regulating ratio" of 3 pulley block system type ATD? |                              |                    |  |  |
| (a) 1:1 (b) 2:1  | (c) 3:1                      | (d) 5:1            |  |  |
| Q.111 If SS wire of ATD broken, OHE does r                                   | not come on ground           | due to:-           |  |  |
| (a) 9-ton insulator (b) fixed pulley   | (c) movable pulley           | (d) hex tie rod    |  |  |

| Q.112 Cur        | rent collection test is carrie | ed out during :-                                       |
|------------------|--------------------------------|--|
| (a) t            | pefore monsoon                 | (b) during monsoon                                     |
| (c) a            | after monsoon                  | (d) night only   |
| Q.113 Wha        | at may be the reason of sp     | parking during current collection test.                |
| (a) (            | OHE is not proper              |  |
| (b) t            | rack is not proper             |  |
| (c) r            | olling stock is not proper     |  |
| (d) a            | all of the above or either (a  | a) or(b) or (c)  |
| Q.114 In Id      | ocally arranged power blo      | ock ,supply of the siding or yard is shut down by      |
| :-               |                                |  |
| (a) <sup>-</sup> | ГРС                            | (b) section controller                                 |
| (c) y            | ard master                     | (d) OHE incharge, who required power block             |
| Q.115 TPC        | c arranges emergency pov       | wer block in which of following case/s?                |
| (a)              | a damaged OHE or fee           | eder falling down and or persons or animals or         |
| \                | vehicle or falling trees co    | ming in contact with or likely to come in contact      |
| ١                | with live equipment            |  |
| (b) a            | a damaged electric loco &      | driver requires the permit to work                     |
| (c) c            | derailment or any other ac     | cident on the electrified section                      |
| (d) a            | all of the above               |  |
| Q.116 In th      | ne private no. book , privat   | e nos. are printed in the form of :-                   |
| (a) t            | wo digits, serially            | (b) three digits, serially                             |
| (c) t            | wo digits, not serially        | (d) three digits, not serially                         |
| Q.117 Dur        | ing power block, which         | type vehicles movement is blocked in power             |
| bloc             | ck section ?                   |  |
| (a) e            | electric hauled                | (b) diesel hauled                                      |
| (c) s            | steam hauled                   | (d) all of the above                                   |
| Q.118 Bef        | ore granting power block       | in the section , the longitudinal $\ \ protection$ and |
| late             | ral protection in the section  | n is arranged by:-                                     |
| (a) <sup>-</sup> | TPC                            | (b) section controller                                 |
| (c)              | TNL                            | (d) station master                                     |
| Q.119 If C       | HE breakdown or defect         | in OHE, which are likely to affect the train           |
| services         | noticed by any railway         | servant , will be reported immediately to :-           |
| (a) <sup>-</sup> | ГРС                            | (b) station master                                     |
| (c) s            | section controller             | (d) either (a) or (b) or (c)                           |

| Q.120 Cross section area of contact wire in AC    | OHE is                            |
|---|-----------------------------------|
| Q121 Diameter of dropper ismm.                    |                                   |
| Q122 Spacing between droppers in span is 9 m      | <u>:s</u>                         |
| Q123 To pass ODC in electrified territory, cleara | nce should be greater than 100mm. |
|   |                                   |

| 1.         | What is the total      | power of the     | loco (d   | elivered by all the motors     | put  |
|            | together)              | kw?              |           |                                |      |
| 2.         | What is the weight p   | oer axle         |           | ?                              |      |
| 3.         | For which gauge thi    | s loco is desigr | ned       | ?                              |      |
| Q.16 Va    | rious types of Brakes  | s provided in a  | locomot   | tive could be                  |      |
| 1.         |                        |                  |           |                                |      |
| 2.         |                        |                  |           |                                |      |
| 3.         |                        |                  |           |                                |      |
| Q.17 Wh    | at is the principle    | of speed cont    | rol in a  | n electric locomotive? Plea    | ase  |
| explain th | e process briefly.     |                  |           |                                |      |
| Q.18 Wr    | ite function of follow | ring equipments  | s of elec | etric loco in one line -       |      |
| 1.F        | Rectifier              |                  |           |                                |      |
| 2. l       | OJ .                   |                  |           |                                |      |
| 3. ا       | Pantograph             |                  |           |                                |      |
| Q.19 Wh    | at operations loco     | pilot requires   | to perf   | form before entering a neu     | tral |
| section?   |                        |                  |           |                                |      |
| Q. 20 In   | a Bo-Bo-Bo type of     | locomotive, ho   | w many    | traction motors (axels). Will  | be   |
| there?     |                        |                  |           |                                |      |
| a) :       | 2 b) 3                 | c) 4             | d) 6      | ( )                            |      |
| Q.21 Wh    | at does MEMU stan      | d for ?          |           |                                |      |
| a) 220V    |                        | <u>.</u>         |           |                                |      |
| b) 50Hz    |                        | ( )              |           |                                |      |

| Q.22   | Electric loco is provide  | d with 2 pantograph? Which one is normally      |  |  |  |
|--------|---|---|--|--|--|
| used.  |   |   |  |  |  |
|        | a) Front b) Rear  | c) Any one of the two d) c or b                 |  |  |  |
|        |   |   |  |  |  |
| Q 23   | First letter of classification indicated                            | catesof loco.                                   |  |  |  |
| Q 24   | Two axle bogie with one traction                                    | on motor for each axle is classified as         |  |  |  |
| Q 25   | WAG.5 loco is provided with   | bogie arrangement.                              |  |  |  |
| Q 26   | WAP.5 loco is provided with   | bogie arrangement.                              |  |  |  |
| Q 27   | WCG.2 loco can work under   | traction supply.                                |  |  |  |
| Q 28   | There are No. of mainter  | nance sheds over IR for maintenance of electric |  |  |  |
| locos. |   |   |  |  |  |
| Q 29   | type Traction motor is  | sused in WAP.4 locos.                           |  |  |  |
| Q 30   | type Traction motor   | is used in WAP.5 locos.                         |  |  |  |
| Q 31   | Electric loco draws power from                                      | OHE with the help of                            |  |  |  |
| Q 32   | Electric Locomotive is provided withnos of pantograph.              |   |  |  |  |
| Q 33   | can be remote controlled from driving cab to disconnect OHE supply. |   |  |  |  |
| Q 34   | High OHE voltage is stepped down with                               |   |  |  |  |
| Q 35   | The voltage to traction motors                                      | can be controlled through                       |  |  |  |
| Q 36   | WAG.5 loco are provided with  | :   |  |  |  |
|        | (a) DC series motor   | (b) Single phase Induction motor (c)            |  |  |  |
| DC cc  | ompound motor,  | (d) None of the above.                          |  |  |  |
| Q 37   | Smoothing reactor (SL) is prov                                      | ided to :                                       |  |  |  |
|        | (a) Convert AC to DC  | (b) Increase undulation of current              |  |  |  |
|        | (c) Reduce undulation of curre                                      | nt (d) reduce OHE supply.                       |  |  |  |
| Q 38   | Auxiliary machines in locomotive                                    | ve work on:                                     |  |  |  |
|        | (a) Single phase ac supply  | (b) DC supply                                   |  |  |  |
|        | (c) Three phase supply  | (d) All of them                                 |  |  |  |
| Q 39   | Traction Motors are mounted:  |   |  |  |  |
|        | (a) On loco roof, b) In under fra                                   | ame,(c) Inside Locomotive                       |  |  |  |
|        | (d) None of them.   |   |  |  |  |

Q 40 Normally loco pilot uses: (a)Front pantograph (b) Rear Pantograph, (c) Both Pantograph (d) None of them. Q 41 ARNO converter is provided to convert: (b) AC to DC (a) Three phase to single phase, (c) DC to AC (d) Single phase to three phase. Q 42 Independent brakes are provided for: (a) Brake application in loco alone (b) Brake application in train alone, (c) Brake application in loco and train both (d) None of them. Q 43 During dynamic braking: Kinetic energy of loco is converted to Electrical Energy (b) Electrical energy is converted to mechanical energy, Mechanical brakes are applied in loco (c) None of them. (d) Q 44 In regenerative braking: (a) Electrical energy produced is converted to heat energy, (b) Electrical energy produce is fed to traction motor, (c) Electrical energy produced is fed back to OHE (d) None of above. Q 45 Supply in control circuit of loco is: (a) 380 Volt single phase, (b) 380 Volt three phase, (c) 110 Volt DC, (d) 110 Volt AC. Q 46 The input supply to three phase traction motor is: (a) Fixed frequency variable voltage, (b) Fixed voltage variable frequency, (c) Variable voltage variable frequency, (d) None of them.

### True or False:

- Q 47 In DC locos all the traction motors are connected in parallel in starting
- Q 48 In AC locos, starting resistances are introduced to control the speed of Traction Motors.
- Q 49 WAP.4 locos are three phase locomotives.
- Q 50 WAG.9 locos are three phase locomotives.

- Q 51 Three phase traction motors are used in WAP.5 locos.
- Q 52 POH of electric loco motive is carried out at nominated electric loco work shop.
- Q 53 WAG.5 locos have Co-Co bogies.
- Q 54 Pantograph is mounted within the driving cab of the loco.
- Q 55 Mechanical Brakes in Locomotives are air brake only.
- Q 56 Silicon rectifiers reduce the undulation of current.
- Q 57 Transformer is used to step down OHE supply.
- Q 58 IGBTs are used to convert single phase to three phase supply.
- Q 59 Bo wheel arrangement indicate two axle bogie with two traction motors.
- Q 60 WAP.5 loco can work both in AC and DC sections..
- Q 61 ARNO converter converts AC supply to DC.
- Q 62 In locomotive, brakes are applied by destroying vacuum.
- Q 63 ARNO converters are being replaced by static converters.
- Q 64 Proportionate brakes in loco are applied with A9 brake valve.
- Q 65 DC series traction motors are provided in WAG.9 locomotives.
- Q 66 AOH of WAG.5 loco is carried out after 18 months.
